

Introducing the Embassy® Classroom Security Function Lockset

With the recent increase in school violence, protecting students, staff, and property has become paramount for school administrators and school boards nationwide. To meet the increased demands for quality high security products, Medeco introduces the Embassy® Classroom Security function cylindrical lever lockset.

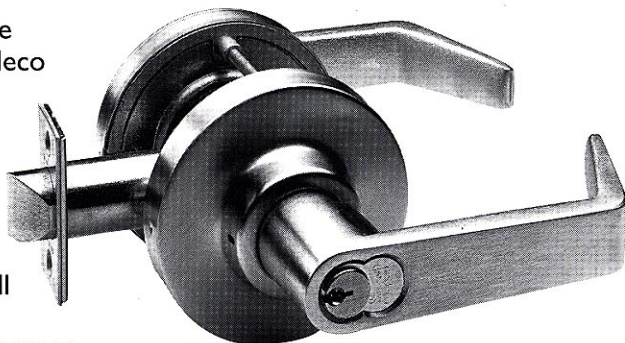

Updating the Classroom Function

The typical classroom function lock is designed so a door can be locked or unlocked only from the outside. Exit is always possible from the inside of the room whether the door is locked or unlocked. This provides security from the outside and life safety protection from the inside of the room, since no one can be locked inside in case of fire. However, in an emergency situation, the classroom function does not allow a teacher to secure the classroom without stepping into the hallway to lock the door from the outside.

The Medeco Classroom Security function lever lockset, on the other hand, can be locked or unlocked from either side of the door by a key, yet allows those within the classroom to exit at all times. Unlike deadbolts, or lockset functions that allow locking from inside, this new function provides the continuous egress needed to meet code requirements and protect life and safety. And, since it can only be locked from either side by a key, it eliminates the possibility of students locking a teacher out of the classroom.

Function Description

- Deadlocking latch bolt operated by lever from either side except when outside lever is locked by key from inside.
- Key outside locks or unlocks lever.
- Inside lever always operates latch bolt.
- Available in all trim designs and finishes.
- Key-In-Lever cylinders and Interchangeable Cores can be keyed into any existing Medeco key system.
- Exceeds ANSI operational and security Grade I requirements.
